HPSAV 3000 Pressure Transducer

1/5

General description

Pressure transducer model HPSAV 3000 is an OEM pressure sensing device with temperature compensated and calibrated output.

High performance and accuracy enables use of this transducer in many applications, and with its compact and handy design is very suitable for OEM users. The HPSAV 3000 pressure transducer are constructed on 1 mm thick ceramic substrate with one or two pressure tubes. Thick film resistors printed on substrate are individually laser trimmed to provide temperature compensation, zero and span calibration. Pressure media compatible with this transducers family is dry air or non-corrosive gases and liquids.

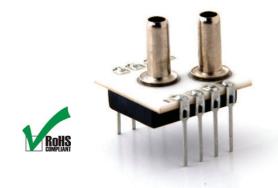

The model HPSAV 3000 is designed for constant voltage excitation. Whole family includes pressure ranges from 10 mbar up to 7 bar.

Features

- Constant voltage excitation
- Easy to use DIP package
- Wide compensated range (0 to 70°C)
- High performance OEM applications
- Zero and span calibration
- Differential, gage and absolute configurations
- Wide pressure range from 10 mbar up to 7 bar

Applications

- Medical instrumentation
- Respirators
- HVAC
- Process control
- Leak detection
- Pneumatic controls
- Altimeters

Specification notes

- 1) Over pressure is the maximum pressure which may be applied without causing damage to the sensing element.
- 2) Burst pressure is the maximum pressure which may be applied without causing leakage damage to the sensing element.
- 3) Analog output signal is ratiometric to input supply voltage V_{cc}.
- 4) Offset voltage is the voltage output at zero pressure.
- 5) Span is the algebraic difference between the output at full scale pressure range and offset.
- 6) Thermal error of span and offset represents the maximum deviation of transducer signal (span and offset) through whole compensated temperature range from 0 to 70°C in compare to value at 25°C. For pressure ranges p ≤ 100 mbar this parameter is defined as 0.5 mV max.
- 7) Repeatability is defined as typical deviation of the output signal after 10 pressure cycles.
- 8) Nonlinearity is defined as the BFSL (best fit straight line) across entire pressure range, measured on P1 top die side.
- 9) Media compatibility: on pressure port P1: clean, dry and noncorrosive gases to silicon, Pyrex, RTV, gold, ceramics Al₂O₃, epoxy, tin.
- 10) Media compatibility: on pressure port P2: noncorrosive gases or liquids to silicon, Pyrex, RTV, ceramics Al,O₃, epoxy, tin.
